

Figtree<workers>

Figtree Workers Compensation system administer up to 20% of all workers compensation claim registrations in Australia for 70% of self-insurers, third party claims administrators and insurers. Figtree<workers> is compliant with WorkCover legislative requirements in all jurisdictions (including Comcare) within Australia and New Zealand and has the capability to handle multiple jurisdictional and national requirements when needed. The application is supported by an array of features such as ad-hoc reports, recurring payments, medical certificate management, multi-claims configuration and many more.

Figtree<lines>

Figtree<lines> caters for all lines of general insurance, including marine, industrial special risks, public and professional liability, property, motor vehicle, professional indemnity. The system has the ability to allow users to not only add and update, fully monitor and analyse the incident/claim data, including basic as well as more advanced information relating to the actual incident, but also details relating to all parties involved at any time during the lifecycle of the associated record-related correspondence. The application can be interfaced with your external databases for the management of policy, vehicle and asset details.

Figtree<risk>

Figtree's Risk Management software has been designed around the Australian Risk Management standard AS/NZS 4360:2004 to provide a best practice and consistent approach to corporate risks. Some of the capabilities of the system include Concise reporting of hazards, risk treatments & controls, Calculation of estimated and probable maximum loss, Identify areas of potential cost savings, Risk Profiles access over internet, Measuring of risk reduction

Figtree<policy>

Figtree<policy> is an add-on to the Workers' Compensation system. The core functionality for this module is geared towards the capturing and processing of insurance policies, underwriting data, premiums, limits, deductibles and values. Its interface capabilities with other applications provide users with the access and retrieval of file information for sophisticated workflow management between policy administration, underwriting and claims operations. The production of the policy wording, certificates and premium statements is also available as a standard, as is the option for customised web pages for capturing the renewal data.

Figtree<life>

The system allow users to track and validate the life claim against policy specifications. This is designed to reduce the lodgement process of claims as the system makes claims status information always available online. This provides users with real time access when claiming file information involving third parties including beneficiaries, employers, assessors and other third parties. Third party information (beneficiary verifications, death certificates verifications) can be filtered into an electronic claim file system via (automatic) generated forms.

Figtree<ohs>

Registration of hazards and incidents can be done internally via the corporate LAN/ Intranet, externally via the Internet, through a call centre or alternatively, the system can be delivered as an ASP (Application Service Provider) solution. The application allow users to produce proactive analysis and treatment of risks and hazards before they lead to unnecessary injury, legal action or death. Other key components of the system include Rehabilitation/ Return to Work Planning and full integration capability with Figtree<risk> combining details of accidents, injuries and claims and the associated costs

Complete Solution for Effective Risk & Claims Management
