

Depending upon your business needs, your IT resources or budget; there exists the option to either have your chosen Figtree application installed within your own IT infrastructure, or alternatively, outsource it to the Figtree ASP service. Each option provides the exact same level of functionality to the user, and there are no operational differences!

The ASP solution, comes with a detailed 'Service Level Agreement' that covers functional and technical support, database back-ups, software upgrades and security. All you need to access Figtree is an internet connection & browser and a username/password. This, therefore has the added value of allowing the user to be 'remote', whenever they want to access the system.

Figtree ASP solution delivers a service to clients by hosting, managing and providing access to business applications. There are many variations to the model from simply hosting a custom application online to providing a full IT infrastructure, all of which are generally supplied on a subscription basis.

How does it work?

All data and Figtree applications are managed, stored, protected and maintained at a facility other than the client's site and are accessed securely either via the Internet or a Virtual Private Network (VPN). To the person sitting behind the computer, there is no obvious difference to what they would see on the screen, if the application were installed.

Why choose Figtree ASP?

The Figtree ASP solution provides businesses with an array of benefits:

- Affordable monthly payments
- Rapid software implementation & delivery
- Lower hardware costs
- Automatic back up service provided
- Web encryption
- Access your system from anywhere via the Internet in real time
- Predictable fixed, tax-deductible on-going expense

By outsourcing a Figtree Application to our ASP facility, the need to have costly hardware and equipment on your own premises is removed, as well as offering far greater security than a traditional setup and removing the costly efforts associated with set-up and maintenance, along with other hassles associated with running an IT system.

Organisations with complex requirements or multiple offices

Some of Figtree clients operating over multiple locations have high IT overheads which results from multiplying the IT cost for each location by the number of offices. This is due to the fact that much of the infrastructure needs to be replicated at each office. This is where Figtree ASP option can significantly reduce your costs by a centralised system. In effect you only pay for the 'one system', regardless of how many different locations are being serviced.

For more information about Figtree ASP solution, please visit our global website www.figtreesystems.com or submit an online form or email (available on our website) and a Figtree consultant will attend to your query within 48 hours
