

*One unified software system  
for risk reporting and  
management*

## THE FIGTREE ADVANTAGE | RISK MANAGEMENT

---

Figtree Systems enterprise risk management software equips risk managers with a scalable risk solution that consolidates disparate data and provides a consistent workflow framework for risk reporting, analysis and control.

The system is modelled around the ISO 31000 standard and includes integrated modules for risk context, risk assessment, controls and audit functions. By unifying reporting functions, businesses achieve a single source of truth to their records and provide management with enterprise-wide visibility of the company's risk management performance.

***One secure solution to capture, track and manage risk online, from any device, any time.***

By standardising reporting practices, Figtree Systems strengthens data integrity and enables reports and analytics to be run at all levels. In turn, emerging risk trends can be benchmarked and targeted for improvement. To ensure complete data security, all data collection, usage and storage practices are in alignment with ISO 27001 information security standards.

The system's workflows assist in standardising risk management processes. This ensures that tasks are allocated, accountability is enforced and risk-review processes are cyclic and subject to ongoing review. Additional, business-specific workflows can be configured into the solution to automate notifications, reviews and approvals.

## FEATURES

- Risk library
- Integrated audits
- Reporting
- Controls & actions
- SaaS cloud solution
- Workflow management
- Configurable risk matrices
- ISO 31000 aligned framework
- Event and activity management
- Seamless integration with existing Figtree products

## ABOUT US

Figtree systems has over 3 decades of experience as a trusted provider of highly configurable, off the shelf software services for insurance claims and risk management. Figtree systems has helped hundreds of organisations around the globe, delivering and supporting software for insurance claims management, policy management, work health safety, risk management and fleet and asset management.
